COIMBATORE INSTITUTE OF TECHNOLOGY, COIMBATORE-641014
(Government Aided Autonomous Institution, Affiliated to Anna University, Chennai)
DEPARTMENT OF PLACEMENT CELL

ACADEMIC YEAR 2025-26

STUDENT FEEDBACK

Student Name	:	**Elankumaran K**
Roll number	:	**71762207011**
Department	:	**B.Tech IT**
Personal email id	:	**elankumarank27@gmail.com**
Contact number	:	**7604992336**
Company name	:	**ZOHO**
Company type	:	**IT – Non-Dream**
Salary (ctc)	:	**8.4 LPA**
Intern offered	:	**Yes**
Bond	:	**No**

ROUND 1

Platform used: No platform just pen and paper

Round details:

Total question = 20

Time = 1hr

No options will be provided for the questions; you have to write the answers in the answer sheet given.

Topics/Areas Covered:

Two sections :

Section A – C Programming (output prediction) **= 10 Questions.**

Section B – General aptitude **= 10 Questions.**

Your Comments:

- Try to complete the known general aptitude questions first, this will give you an idea about how to efficiently use this remaining time to complete the C programming questions as well as remaining aptitude questions if unattended.
- In C programming output prediction questions look for clues in the question, there will some hidden clues in some questions which will make us to predict the output faster.
- Don't waste your time on single question there will be many easy questions up ahead try solve those and come back later to this question.

Did you clear this round? **Yes**

Details about questions on 1st round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
C program	• Muti-dimensional Array • Recursion • Multiple loop statements • Operator precedence • Pattern printing • Conditional statements	**I traced each question in the rough paper and noted the output.**	https://www.geeksforgeeks.org/quizzes/input-and-output-gq/
General Aptitude	• Average • Time and distance • Clock • Problems on Trains • Profit and loss • Ages • Ratio • Area • Percentage • Time and Work	**I studied each topic on (feel free to learn) YouTube channel and practiced in CareerRide.**	https://www.youtube.com/@FeelFreetoLearn https://www.careerride.com/

ROUND 2 : Technical Interview

Platform used: Your own IDE (For Java I used eclipse)

Round details:

- 5 programming Questions
- Questions will be given one by one after completing each question

(If you're from computer science departments you are asked to give solutions in optimal after that only next question will be given)

Topics/Areas Covered:

- Binary search
- Two pointers
- Sliding window
- Recursion
- Pattern matching

Your Comments:

- I have completed 4 questions, try to solve at least 3 questions.
- I tried to solve the questions with Brute force, since I was from IT dept interviewer asked me to optimize it, then I optimized my solution.
- If you don't know the optimal solution, try to give the brute force some interviewers might accept and give you the next question.

Did you clear this round? **Yes**

Details about Questions on 2nd round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
Binary Search	**Finding Sqrt of a number** **Problem Statement:** You are given a positive integer n. Your task is to find and return its square root. If 'n' is not a perfect square, then return the floor value of 'sqrt(n)'. **Note:** *The question explicitly states that if the given number, n, is not a perfect square, our objective is to find the maximum number, x, such that x squared is less than or equal to n (x*x <= n). In other words, we need to determine the floor value of the square root of n.* **Examples** **Example 1:**	**I tried to solve using a for loop iterating upto n/2 And checking whether this number will be the sqrt of n.** **I tried to optimize it and solved using binary search.**	https://www.geeksforgeeks.org/dsa/square-root-of-an-integer/

	Input Format: n = 36 **Result:** 6 **Explanation:** 6 is the square root of 36. **Example 2:** **Input Format:** n = 28 **Result:** 5 **Explanation:** Square root of 28 is approximately 5.292. So, the floor value will be 5.		
Two Pointers	**Count Pairs with Sum Less Than Target** Given an array **arr[]** and an integer **target**, the task is to find the **count** of pairs whose sum is **strictly less** than given target. **Examples:** ***Input***: *arr[] = [7, 2, 5, 3], target = 8* ***Output:*** *2* ***Explanation:*** *There are 2 pairs with sum less than 8: (2, 5) and (2, 3).* ***Input:*** *arr[] = [5, 2, 3, 2, 4, 1], target = 5* ***Output:*** *4* ***Explanation:*** *There are 4 pairs whose sum is less than 5: (2, 2), (2, 1), (3, 1) and (2, 1).* ***Input:*** *arr[] = [2, 1, 8, 3, 4, 7, 6, 5], target = 7* ***Output:*** *6* ***Explanation:*** *There are 6 pairs whose sum is less than 7: (2, 1), (2, 3), (2, 4), (1, 3), (1, 4) and (1, 5).*	**I generated all the pairs and checked whether the sum is less than the target.** **I tried to optimize it and solved using two pointers approach.**	https://www.geeksforgeeks.org/dsa/count-pairs-array-whose-sum-less-x/

Recursion	**Find the longest palindromic path from start to end in a grid.(only up and down movements are allowed).** **Given an N x M matrix of integers, the task is to return the longest palindromic string from start to end.** ***Input: matrix = [[a, b, a], [b, d, b], [c, d, a]]*** ***Output: ababa, abdba***	**I solved using recursion and explored all the possible paths from top left to bottom right, following up and down movements alone and checked whether its palindrome or not and stored maximum length palindromic string.**	https://www.geeksforgeeks.org/dsa/count-of-palindromic-plus-paths-in-a-given-matrix/
Sliding Window	**Minimum Window Substring** **You are given two strings, s1 and s2. Your task is to find the smallest substring in s1 such that s2 appears as a subsequence within that substring.** **Examples:** **Input: s1 = "geeksforgeeks", s2 = "eksrg"** **Output: "eksforg"** **Explanation: "eksforg" satisfies all required conditions. s2 is its subsequence and it is smallest and leftmost among all possible valid substrings of s1.** **Input: s1 = "abcdebdde", s2 = "bde"** **Output: "bcde"** **Explanation: "bcde" and "bdde" are two substrings of s1 where s2 occurs as subsequence but "bcde" occur first so we return that.**	**I solved using brute force only, I didn't give the optimal solution.** **I generated all the substrings and checked each one.**	https://www.geeksforgeeks.org/problems/minimum-window-subsequence/1

ROUND 3

Platform used: Your own IDE (For Java I used eclipse)

Round details:

- Advanced coding round.
- They will ask you design a low-level application using OOPS concepts.
- They will separate the application as multiple tasks and ask you to solve the tasks one by one.

Topics/Areas Covered: Low level system design.

Your Comments:

- Focus on solving the tasks, you don't have to implement all the OOPS concepts, focus on completing the tasks as given on the question paper.
- They ask you to draw the design diagram first and they will ask how will you implement it, what are the data Structures will you use to implement the functionalities.
- They will check your application by testing using edge cases too.
- If they are satisfied, they will ask you to move on to next task.
- The interviewer asked me to continuously implement new features to a single task itself, so I don't get enough time to solve more than 3 tasks.

Did you clear this round? **Yes**

Details about questions on 3rd round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
System design	Develop a WhatsApp like communications system Design a real time communication system which should contain functionalities like register a contact, one to one message, group chats, admin and user privileges.	**I tried to implement the tasks one by one after the interviewer satisfied with my system design, I had drawn.** **REFER THE LINKS FOR GETTING AN IDEA ABOUT THE ROUND**	https://medium.com/@aravind16101800/building-a-flight-ticket-booking-application-zoho-round-3-solution-a165fa263003 https://github.com/B-Rajagopalan/CodingAtti-

			YouTube/tree/main/Zoho_AdvancedProgramming_Round3/src

IN CAMPUS RECRUITMENT NO ONE WAS GIVEN THE JOB OFFER

AFTER A WEEK THEY CALLED FOR A POOL CAMPUS RECRUITMENT TO KPR COLLEGE OF ENGINEERING

THEY CALLED ALL THE STUDENTS WHO CLEARED THE ROUND 2

AGAIN, THEY CONDUCTED FROM ROUND 2

ROUND 2

Platform used: Your own IDE (For Java I used eclipse)

Round details:

- 5 Programming questions
- You are allowed to solve any problem first
- **You should not use any inbuilt string functions.**

Topics/Areas Covered:

- Strings
- Pattern printing
- Sliding window

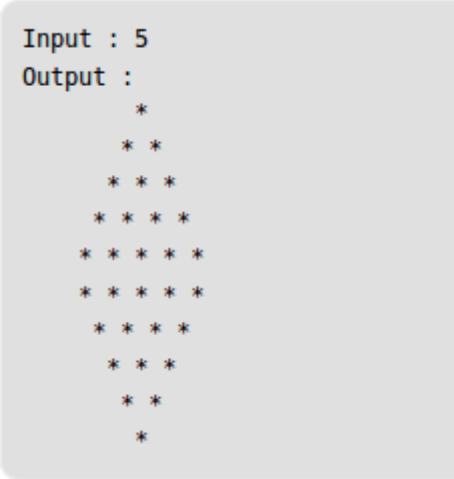
Your Comments:

- I tried solving the easy ones and gained the interest of the interviewer.
- Here they didn't ask me to optimize any questions, they checked whether it will pass all the test cases or not.
- Try to solve at least 3 questions to crack the round.
- Explain the approach clearly to the interviewer.

Did you clear this round? **Yes**

Details about questions on 4th round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
Strings	**Regular Expression Matching** Given a text **t** and a pattern **p** where t consists of only lowercase English alphabets while **p** consists of lowercase English alphabets as well as special characters '**.**' and '***',** the task is to implement a function to test regular expression such that: • '.' Matches any single character. • '*' Matches zero or more of the preceding character. ***Input:*** *t = "aaa", p = "a"* ***Output:*** *""* ***Explanation:*** *"a" does not match the entire string "aaa".* ***Input:*** *t = "abb", p = "a.*"* ***Output:*** *abb* ***Explanation:*** *replace* **.** *with b then p becomes ab* now replace * with one preceeding character hence p becomes abb.*	**I used a loop for iteration and checked for special character encounter like '*' and '.'.**	https://www.geeksforgeeks.org/dsa/implementing-regular-expression-matching/
Pattern printing	**Program to print the Diamond Shape** Given a number **n**, write a program to print a diamond shape with **2n** rows. **Examples :**		https://www.geeksforgeeks.org/dsa/program-print-diamond-shape/

Strings	You are given a string S, you have to keep the first occurrence of a character and remove all other occurrence of it, similarly you have to keep the last occurrence of a digit and remove all other occurrence of it. Example String S=”aba1da1232” Output: “abd132”.	**I used two loops first one for character start from the beginning and second loop for digits start from the end of the string.**	https://www.geeksforgeeks.org/dsa/remove-the-first-and-last-occurrence-of-a-given-character-from-a-string/
Strings	Longest Substring Of All Vowels in Order • Each of the 5 English vowels ('a', 'e', 'i', 'o', 'u') must appear **at least once** in it. • The letters must be sorted in **alphabetical order** (i.e. all 'a's before 'e's, all 'e's before 'i's, etc.). For example, strings "aeiou" and "aaaaaaeiiiioou" are considered **beautiful**, but "uaeio", "aeoiu", and "aaaeeeooo" are **not beautiful**. Given a string word consisting of	**I used two loops and solved the problem.**	https://leetcode.com/problems/longest-substring-of-all-vowels-in-order/description/?utm_source=chatgpt.com

	English vowels, return ***the longest beautiful substring*** *of* word. *If no such substring exists, return* null. **Example 1:** **Input:** word = "aeiaaioaaaaeiiiiouuuooaauuaeiu" **Output:** "aaaaeiiiiouuu" **Explanation:** The longest beautiful substring in word is "aaaaeiiiiouuu" of length 13. **Example 2:** **Input:** word = "aeeeiiiiioooauuuaeiou" **Output:** "aeiou" **Explanation:** The longest beautiful substring in word is "aeiou" of length 5. **Example 3:** **Input:** word = "a" **Output:** "" **Explanation:** There is no beautiful substring, so return null.		
Strings	Remove Common Words from Three Strings You are given **three strings**, s1, s2, and s3, each consisting of a sequence of space-separated words. Your task is to: 1. **Find all words** that are **common to all three strings**.	**I split the words from the string and found the common words and removed from the string.** **I didn't complete the problem but the interviewer asked**	https://www.geeksforgeeks.org/dsa/python-program-to-remove-words-that-are-common-in-two-strings/?utm_source=chatg

	2. **Remove all occurrences** of these common words from each of the three strings. 3. Return the **updated strings** after the common words have been removed. **Input** s1 = "sun moon star planet galaxy universe nebula comet asteroid rocket launch mission explore" s2 = "galaxy rocket moon planet mission launch earth satellite asteroid sun" s3 = "mission rocket galaxy moon sun planet station orbit asteroid" **Output** s1 = "star universe nebula comet explore" s2 = "earth satellite" s3 = "station orbit"	**about my approach.**	pt.com

ROUND 3

Platform used: Your own IDE (For Java I used eclipse)

Round details:

- Advanced coding round.
- They will ask you design a low-level application using OOPS concepts.
- They will separate the application as multiple tasks and ask you to solve the tasks one by one.

Topics/Areas Covered: Low level system design.

Your Comments:

- Focus on solving the tasks, you don't have to implement all the OOPS concepts, focus on completing the tasks as given on the question paper.
- They ask you to draw the design diagram first and they will ask how will you implement it, what are the data Structures will you use to implement the functionalities.
- They will check your application by testing using edge cases too.
- If they are satisfied, they will ask you to move on to next task.

Did you clear this round? **Yes**

Details about questions on 3rd round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
System Design	**Build a Taxi booking application** Build a taxi booking application which contains taxi drivers, users and 5 different locations A B C D E the distance between each point from the beginning is given. User should able to pick a taxi which is near to them, and calculate fair 10 per kilometer. The application should take a commission of 30 percent. The driver and user should able to view their summary.	**I implemented one by one and also implemented the changes given by the interviewer.**	https://github.com/B-Rajagopalan/CodingAtti-YouTube/tree/main/Zoho_AdvancedProgramming_Round3/src/taxiBooking

ROUND 4

Round details: Technical Interview

Topics/Areas Covered:

- Projects
- Java
- Oops concepts
- Aptitude
- Puzzle
- Operating System
- Internship Experience

Your Comments:

- The interviewer was very friendly and even asked questions in Tamil and I answered in Tamil too.
- Explain your views about the questions asked by the interviewer clearly.
- They asked about my projects, its architecture diagram be clear with your projects.
- Be confident , if you fear you may even forget things that you know.
- Be thorough with your core subjects basics.

Did you clear this round? **Yes**

Details about questions on 4th round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
Project	Explain your project and its architecture diagram.		
Internship	Where did you do your intern? How many days? Do they contact you for further improvement of the project?		
Operating System	What is process and thread?		

OOPS	What are the four pillars of OOPS? Explain each with example. What is the difference between abstract class and interface? Give the real-life example where will you use interface and abstraction? What are the types of inheritance? Explain multilevel inheritance with example.		
Java	Explain try and catch. Write the code for arithmetic exception. What is the use of finally? Explain throw, throws, what is the difference between them? Can we create object for abstract class? If I give return statement inside the try method, will the final block be executed Do you know about Collections, list some of them. What is the difference between ArrayList and linked list? Difference between HashMap and HashTable? String is mutable or immutable in java. What is the difference between string, StringBuilder, StringBuffer?		
Aptitude	Asked a problem in ratios and percentage (Medium Level).		

Puzzle	Given two hourglasses of 4 minutes and 7 minutes, the task is to measure 9 minutes.		https://www.geeksforgeeks.org/aptitude/puzzle-27-hourglasses-puzzle/
General	Asked about my family background. Comfortable work location.		

ROUND 5

Round details: General HR

Topics/Areas Covered:

- General HR questions
- Family background.

Your Comments:

- Talk boldly, don't give one sentence answers.
- Go through the company website before moving to this round.
- Speak like you are interested towards the company.

Did you clear this round? **Yes**

Details about questions on 5th round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
	Tell me about your family background. Why did you choose CIT? What was your comfortable work location Chennai or Coimbatore? What was your salary expectations? Do you have any dream company?		

	Tell me your 3 good qualities. How do you overcome stage fear, what do you have done to overcome that? (I mentioned that I had stage fear) What do you know about Zoho? List some products of Zoho.		
	Have you placed in any other company? Have you attended any HR round previously? Why you are not able to crack that round? Where will you see yourself in 5 years? Do you have any questions?		

Areas to prepare :

- **Aptitude**
- **C program output prediction**
- **Dsa problem solving skills**
- **Low level system design**
- **OOPS, OS, thorough in your program language**
- **Know about the company**
- **Resume**

Sites / books you suggest for preparation for the process :

- **Aptitude: Feel free to learn YouTube channel and CareerRide.**
- **Java and OOPS : Telusko**
- **Operating System: https://youtu.be/2BayPOKpXiw?si=H_YXlSF5Xoop88ec**
- **System Design: GitHub**
- **DSA: Striver Sheet**

Overall experience :

- **The interviewers were very friendly and they kept me comfortable in each round.**
- **They even asked the questions in Tamil and told me to answer in your comfortable language.**

General tips:

- **Practice DSA problems regularly.**
- **Be strong in your core subjects.**
- **Be confident , if you fear you may even forget things that you know.**

ALL THE BEST (•‿•)

COIMBATORE INSTITUTE OF TECHNOLOGY, COIMBATORE-641014
(Government Aided Autonomous Institution, Affiliated to Anna University, Chennai)
DEPARTMENT OF PLACEMENT CELL

ACADEMIC YEAR 2025-26

STUDENT FEEDBACK

Student Name : SRIKANNAN S

Roll number : 71762205113

Department : B.E – COMPUTER SCIENCE & ENGINEERING

Personal email id : srikannan474@gmail.com

Contact number : +91 9444621082

Company name : ZOHO

Job Type : Software Development Engineer

Job Role : MTS (Member Technical Staff)

Salary (ctc) : 8.4LPA

Intern offered : Yes (Internship + FTE)

Bond : No

Block by the Company : No

ROUND 1 : Aptitude

Platform used: Offline

Round details (Topics/Areas Covered): Difficulty : Easy - Medium

The test had **2 sections**:

- **Code Snippet (C Programming (Output Prediction)) (10 questions)**
- **Quantitative Aptitude (20 questions)**

Time: 45 minutes

Note: No Negative Marking and No Options will be there you should write the correct answer on

your own.

Your Comments: Basic programming knowledge and basic aptitude knowledge is enough to clear this round.

Did you clear this round? **Yes**

Details about questions on 1st round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
C Program	Output prediction [Array, loops]	Dry run the given question	Study Basic C Program syntax through Youtube
Quantitative Aptitude	Covered most of the topics.[Age, train, clock, calender, boat ,wages]	Attempted known questions first to secure marks; due to time constraints, and then answered the rest	Revise basic formulas; discuss shortcuts and techniques with friends (Indiabix, Careerride)

ROUND 2 : Coding Round

Platform used: No online compiler only local environment like (Eclipse, Dev c++,Code blocks etc.)

Round details: Questions are given paper by paper, with each paper containing 2 questions. You must solve the questions in order. Once you finish a question, call the reviewer to get the output verified. Solving 3 to 4 problems is usually enough to clear this round.

Difficulty : Easy – Medium

Topics/Areas Covered:

Binary Search, Strings, DP, Graph, Array, BackTracking, * Pattern.

Did you clear this round? **Yes**

Overall experience : Good

ROUND 3 : System Design

Platform used: No online compiler only local environment like (Eclipse, Dev c++,Code blocks etc.)

Round details: To design an online messaging chat application, several tasks are given. Solving 5 or

more tasks is usually enough to clear this round.

Difficulty : Easy– Medium

Topics/Areas Covered:

OOPS Concept

Did you clear this round? **Yes**

Overall experience : Good

ROUND 4 : Technical Interview

Platform used: Face to Face

Round details: Interview lasted for 45 mins approx.

Difficulty : Easy - Medium

Topics/Areas Covered:

Project Explanation (from Resume), Programming Language Understanding (as per resume), Logical Thinking, Aptitude, Web Design like interface

Did you clear this round? **Yes**

Details about Questions on 4th round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
Logical Thinking	Given a 3x3 cube and 3-minute & 5-minute sand clocks, turn off the stove after exactly 7 minutes. Similarly, with 3-minute and 7-minute clocks, turn it off in exactly 5 minutes.	Measured time using combinations of sand clocks.	IndiaBix, GeeksforGeeks (GFG)
Quantitative Aptitude	One question asked related ages.	Recalled basic age-related formulas and applied shortcut techniques.	IndiaBix, CareerRide

Pattern Print	Print a box-like pattern using *. Then asked to optimize the code to reduce the number of lines.	Initially used two nested loops (O(n^2)), then optimized using a single loop with conditional logic.	Basic C Program
Web Design	Given a requirement to design a food ordering application and asked to draw the layout on paper.	Designed UI/UX layout on paper including main pages like home, menu, cart, and checkout.	None / Self approach

Overall experience : Good

ROUND 5 : HR Interview

Platform used: Face to Face

Round details: Interview lasted for 45 mins approx.

Difficulty : Easy - Medium

Topics/Areas Covered:

Project Explanation (from Resume), Background verification , General discussion

Did you clear this round? **Yes**

Details about Questions on 5th round:

I was asked to introduce myself, explain why I want to join Zoho, share my goals and aims, mention when I expect a salary package, provide background information for verification, and participate in a debate on whether pursuing higher studies is good or not.

General tips:

- Prepare your resume thoroughly and expect deep dives into any project or skill listed.
- For scenario-based or system design-type questions, think aloud and walk through your approach clearly.
- From my experience, this is what happened during my technical round — each panel was different.
- In the HR round, they observe your attitude, communication skills, and how well you explain your thoughts.

Overall experience : Good

COIMBATORE INSTITUTE OF TECHNOLOGY, COIMBATORE-641014
(Government Aided Autonomous Institution, Affiliated to Anna University, Chennai)
DEPARTMENT OF PLACEMENT CELL

STUDENT FEEDBACK

Student Name : NITHRUVAN M

Roll number : 2403717662221028

Department : Master of Computer Applications - MCA

Personal email id : nithruvan21@gmail.com

Contact number : 7904685500

Company name : ZOHO

Company type : IT Non-Dream

Salary (ctc) : 7 LPA

Intern offered : Yes

Bond :No

(Please comment this section in detail to guide your juniors in a bright way)

COMMENTS ON SELECTION PROCESS:

ROUND 1

Platform used: Offline

Round details: Written Test (1 hour)

Topics/Areas Covered: General Aptitude & C Programming

Your Comments:

Focus on repeatedly asked Zoho aptitude questions and practice them regularly

Did you clear this round? **Yes**

Details about questions on 1st round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
Aptitude	Basic Aptitude Questions (Time and Work, Profit Loss, Calendar, Probability and other important topics)		
Technical Aptitude	C, C++, Java output finding questions Strong understanding of inner loops and control statements		

ROUND 2 : Problem Solving Round (Coding)

Platform used: Offline

Round details: It was a coding round primarily focussing on your problem-solving skills and your coding approach.

Topics/Areas Covered: Arrays, Binary Search, String Manipulation and Backtracking

Your Comments: Have a strong knowledge on any programming language. Try to come up with optimal solutions.

Did you clear this round? **Yes**

Details about Questions on 2nd round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
Programming	Find and return the **longest substring** in the input string that matches the given pattern. The pattern string may contain two special characters: • '*' (asterisk): Matches **zero or more occurrences** of the character immediately before it. • '+' (plus): Matches **one or more occurrences** of the character immediately before it. Input: Input String: "abcbbcabb" Pattern: "cb*cab+" Output: "cbbcabb"	**Recursion**	
Programming	Medium level pattern printing	**Inner Loops**	
Programming	Given a string print the first occurrence of each alphabetic character and last occurrence of the numerical characters. **Maintain the relative order** Example: Input: a1b2c34c3b2cb3a1d Output: abc4231d	**HashMap and HashSet**	
Programming	You are given a string consisting of lowercase English letters. Your task is to **find the length of the**	**Didn't complete the coding part.** **Partial Output, but**	

	longest "beautiful substring". Beautiful substring: the vowels must occur in its relative order "aeiou". Input : “aaeeeiihaeiiioooouuixaeiouu” Output: “aeiiiooouu” - 10	**explained an optimal way**	
Programming	Root of a given number without using any inbuilt functions.	**Binary Search**	https://leetcode.com/problems/sqrtx/description

ROUND 3: Low Level Design Round (Coding)

Platform used: Offline

Round details: It was a low level design round. It had around 12 modules and we have to complete the previous task to move on to the next. Round timing – 3 hours (may extend)

Topics/Areas Covered: Object Oriented Programming and In-Depth Knowledge in any programming language.

Your Comments: Try to complete most of the modules within the given time (3 hours) and explain your approach concisely and clearly.

Did you clear this round? **Yes**

Details about 3rd Round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
OOPS Concepts	Build a Cab booking application. The reference link has the actual question that was asked during this round.	**I implemented 90% of the given modules. But they focused really on the core functionalities like “Booking the nearest cab”, ”Rest for the previously**	https://www.geeksforgeeks.org/interview-experiences/zoho-interview-experience-3

		booked driver", "Summary Generation". **Also how clean your code is.**	

ROUND 4: Personal Interview

Platform used: Offline

Round details: Technical / HR interview

Topics/Areas Covered: Area of my interest, Problem Solving, DBMS, Networks, OS, System Design, System Design

Your Comments: Try to answer their questions confidently. Do a case study on your resume, because most of the question will be from your resume.

Did you clear this round? **Yes**

Details about 4rd Round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
DBMS	i)Normalisation with example ii)Write SQL queries for a given scenario. iii) How to query a large dataset efficiently?	**i)1NF, 2NF, 3NF** **ii) Group By and other aggregate functions, JOINS** **iii) Indexing – But there are a lot of approaches before using indexing**	
OS	i)What is a Thread and give an example for Multi-Threading? Multiple ways to create a thread in Java ii)Semaphore and Mutex related questions		

	iii)Multi-process synchronisation like Producer and Consumer problems		
Networks	What happens internally if we search "www.google.com"?	**DNS and OSI Model**	
Problem Solving	After seeing my leetcode profile, the interviewer asked me to give logical approaches for some leetcode problems. Like, No of islands, Top K Frequent Elements, Longest Increasing Subsequence.		
System Design	I was asked my other interests and because I said System Design, the interviewer asked me to design a scalable e-commerce application.		Gaurav Sen - Youtube
Resume	Questions from resume and why I did those projects.		

Areas to prepare : Aptitude, Data Structures and Algorithms. Recursion and Backtracking. String Manipulation. Core Concepts like DBMS, CN, OS, OOPS.

Sites / books you suggest for preparation for the process : Leetcode, HackerRank, TakeUForward A-Z sheet and NeetCode Sheet. GeeksForGeeks for revising core concepts.

Overall experience : Good. The hiring staffs were friendly and supportive.

General tips:

- **During coding rounds, try to explain your approach to the proctors before coding. This might save you a lot of time.**
- **During the technical interviews, answer confidently, speak boldly. Have a deep understanding on your resume.**

COMMENTS ON SELECTION PROCESS:

ROUND 1

Platform used: Offline

Round details: Written Test (1 hour)

Topics/Areas Covered: General Aptitude & C Programming

Your Comments:

Have some basic knowledge on C programming and Aptitute.

Did you clear this round? **Yes**

Details about questions on 1st round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
Aptitude	Basic Aptitude questions.	-	IndiaBix

Technical Aptitude	C programming questions, including concepts of arrays and pointers and functions.	-	IndiaBix

ROUND 2 : Coding Round

Platform used: Offline

Round details: It was a simple programming round that focused primarily on developing logical solutions for problems. We were allowed to use any IDE (incl. online ones) and any language of our choice.

Topics/Areas Covered : Arrays, String Manipulation, Binary Search, Recursion and Dynamic Programming.

Your Comments:

Did you clear this round? **Yes**

Details about Questions on 2nd round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
Programming	To find the square root of a number	Binary search	https://www.geeksforgeeks.org/dsa/square-root-of-an-integer
Programming	To find valid pairs with sum less than Magic number	Two pointer	https://www.geeksforgeeks.org/dsa/count-pairs-array-whose-sum-less-x
Programming	Find the Longest Palindromic Path from Top-Left to Bottom-Right in a Grid (Right or Down Only)	DFS path enumeration + palindrome checking.	https://www.geeksforgeeks.org/count-palindromic-paths-in-matrix
Programming	Find the Shortest Subsequence of s That Contains t	Variant of Minimum Window Subsequence	https://leetcode.com/problems/minimum-window-subsequence

Areas to prepare :

DSA: Sliding Window, Binary Search, Recursion

Sites / books you suggest for preparation for the process :

GeeksForGeeks and LeetCode

Overall experience :

The process helped me strengthen my fundamentals. Each round tested a different aspect—from problem-solving and DSA to system design and core CS knowledge. I learned the importance of clear code structure and communication during interviews.

General tips:

Do not try to solve optimally in the first try, just try to solve it in brute force and move towards optimal solutions.

ROUND 3 : Advanced Coding Round

Platform used: Offline

Round details: It was a simple programming round that focused primarily on developing logical solutions for problems. We were allowed to use any IDE (incl. online ones) and any language of our choice.

Topics/Areas Covered : System Design

Your Comments:

Understanding the applications of OOPS concepts and knowledge of knowing when to implement what will get u through this round.Practice OOPS with real time system designs like railway reservation, library management systems

Did you clear this round? **Yes**

Details about Questions on 3rd round:

DOMAIN	QUESTION	Your Approach / Solution	REFERENCES (If any)
System Design Programming	**WhatsApp-like Communication System Design** Designed a real-time messaging system supporting one-to-one and group chats with message delivery, read	I implemented all of these functions, but honestly, they were focussed more on the way I utilized the OOPS concepts and I was not able to convince them with my methods, they expected better structured code that would flawlessy run in any circumstance.	-

	receipts, and scalable architecture using concepts like message queues, database sharding, and long polling or WebSockets.		

Areas to prepare :

System Design: Object Relationships, Class-Based Design Problems

OOP Concepts: Abstraction, Inheritance, Polymorphism

General tips:

Take a few minutes to develop the initial structure of the system design and get some suggestions form team and move on to the coding part.

ROUND 4 : Technical HR round

Platform used: Offline

Round details: Technical/ HR Interview.

Topics/Areas Covered : Areas of my Interest, Everything that was mentioned(API's and protocols) in my resume.Technically OS, DBMS, Networks is enough to crack this round.

Have you cleared the round : Yes

AREAS TO PREPARE : Basic Understanding of Programming Logic, Arrays, String Manipulation, OOPS concepts, Some DSA concepts.

SITES / BOOKS YOU SUGGEST FOR PREPARATION FOR THE PROCESS :

https://www.geeksforgeeks.org/

https://leetcode.com/

Aptitude websites (There are many of those)

OVERALL EXPERIENCE:

Good, the hiring staff were nice to me, even though I was not upto part of their level and overall it was a pleasant experience throughout the process.

GENERAL TIPS:

Even though I didn't know most answers I was answering with confidence and when I didn't know something I basically admitted it and I think that's what they preferred from me,so stay bold.Even though you did not know the answers they wanted to know whether you can think something out of the box with some confidence.
